

# Solar Electric System

In recent years, photovoltaic or solar electric system production has been growing about 48% per year - making it the world's fastest-growing energy technology.

To reduce our carbon footprint we installed a solar electric system onsite. An average sized commercial solar electric system will reduce a business's carbon footprint by nearly 148 tons of CO<sub>2</sub> during its useful life.

## Solar Fun Facts:

- Solar systems reduce pollution and help combat global warming.
- An average sized commercial solar electric system compensates for the gasoline used to drive a car more than 21,500 miles.
- Or, said another way, this solar system saves the equivalent CO<sub>2</sub> absorbed by about 4 acres of trees.
